qp2 Quad Play Components

At the heart of the qp2 Quad Play are two key components: the Sales module and the Payment module. Depending on your process needs, one or both of these dynamic tools is implemented to give you the precise level of integration and functionality you require. Adapted to your business cycle processes, the Sales and Payment modules offer unparalleled ease of access to all the specific functions and operations your agents need.

Sales Module

The Sales module is a unique and specialized component of the qp2 Quad Play's flexibility. Designed to give the sales agent the most relevant customer information in the least amount of time, it's a powerful tool for increasing productivity and customer satisfaction.

Aside from the standard sales features provided by most point-of-sale systems, the qp2 Quad Play Sales module goes beyond and gives you:

- The flexibility of different sales processes according to the technological behavior of the product being sold
- Dynamic sales reporting
- Eligibility and compatibility configuration for offer variations
- Time and cost savings in the management of corporate subscriptions
- Easy management of "Black Listed" customer lists
- Integration with electronic signatures for 100% paperless transactions
- Configured system usage and information accessibility for partners

Payment module

The qp2 Quad Play Payment module gives you the competitive edge by enabling you to manage customer financial transactions in a flexible and accurate way, customizable to your special needs, in addition to affording you flexible payment approaches.

The qp2 Quad Play Payment module is designed to support front office operations, such as:

- Receive payment for customer due transactions, recurring and one-shot invoices
- Ability to pay invoices partially or totally
- Registering deposits for services or products
- Schedule installments for one or more customer due invoices while easily applying fees and/or discounts
- Ability to pay in advance on the subscription or accounts level
- Dynamic and parameterized search keys
- Ease cashier operations while shortening process times up to 80%

Quad Play Point of Sale
Accelerating Sales, Increasing Loyalty, and Retaining Customers...

**Accelerating Sales, Increasing Loyalty, and Retaining Customers...
It All Starts with the INTRACOM qp2 Quad Play Point-of-Sale!**

For sales and service agents in the telecommunications industry, having quick and accurate access to customer accounts and information is vital to maintaining strong customer satisfaction and increasing sales.

Telecom operators used to be bound to a mix of different modules and systems to provide their agents with the needed information. Their need for a system that covered all their agents' requirements, end-to-end, with quick access to all relevant customer information seemed like a far-away dream.

Dream no more. Intracom IT Services has met this need head-on by developing the most comprehensive telecommunications point-of-sale system on the market. Designed to meet the unique and specific needs of the telecom agent, the qp2 Quad Play point-of-sale offers several layers of advanced innovation and integration.

Why INTRACOM qp2?

No other system on the market can offer the ease of access, security and sophisticated features that the qp2 can.

The qp2 Quad Play is the system you've always needed, but didn't know where to find. Look no further! The solution is here.

qp2 Quad Play Benefits and Advantages

- The point-of-sale system that provides a full integration of the order taking and order fulfillment process
- Product bundling flexibility and a shorter time-to-market for new offerings
- Provides a full view of all customer accounts and activities to the agent without the use of separate systems or programs
- One interface to handle all customer types
- Seamless integration with Oracle e-Business Suite modules
- Full integration with third-party billing and provisioning systems
- Efficient Order Handling
- Control Order Configuration processes
- No duplication of names, accounts or subscription information
- Fully customizable security verifications for technical and company processes
- Ability to limit agent controls and information access through a multi dimensional configuration
- Reduces the number of required running systems
- qp2 is designed to manage Telco cutting edge service offerings through its N level product structure and its parameterized Configuration module

Why the INTRACOM Quad Play Point of Sale is Different?

Think of all the many features that the Oracle e-Business Suite Supply Chain Management, Order Management, Customer Relations Management and Financials modules offer to the users.

Now imagine a system over the top of these modules which organizes all their many features into a systematic and logical design created specifically for the special needs of the telecom industry. Seem like a perfect match? This is the Intracom qp2 Quad Play. No longer does a telecom agent need to go from module to module in order to retrieve the information he/she needs. qp2 Quad Play has it all available quickly and easily.

With over 200 features, the qp2 Quad Play offers more stability and flexibility to the telecom operator than any other point-of-sale. qp2 Quad Play is built on the solid foundation of Oracle e-Business Suite applications and Intracom's many years of telecom experience and expertise. No other point-of-sale offers more.
